U.S. Import Demand For Apple Juice Continues Strong

U.S. apple juice (AJ) imports in 1999/2000 are estimated at a record 225,000 metric tons (70/71 degrees brix equivalent), up 3 percent from last season. AJ imports into the United States totaled 128,119 tons for the period July 1999 through January 2000, up 9 percent from the same period last season.

The July 1999/January 2000 increase mainly reflects expanded shipments from Argentina and Chile, which are up 65 percent and 95 percent, respectively, from the same period last season. Meanwhile, AJ imports from China decreased 72 percent during the same period, while average import prices for the Chinese product increased 31 percent.

On April 6, 2000, the U.S. Department of Commerce announced final antidumping duties on AJ imports from China. Dumping margins were established at between 0 percent and 52 percent, down slightly from the November 1999 preliminary calculation of 55 percent. In a related development, the International Trade Commission is expected to issue its final injury ruling on May 22, 2000. In association, there are indications that import prices for AJ are firming up. For the period July 1999 to January 2000, average AJ import prices for all countries were up almost 30 percent from the same period last season. The concentrated non-frozen category accounts for more than 95 percent of total U.S. AJ imports.

Export Summary

U.S. exports of horticultural products to all countries in March totaled \$768 million, an increase of 0.3 percent from the same month a year earlier. Seven of the 15 product categories registered value increases. Categories with the most significant increases in March were hops (up \$1.5 million or 26 percent) and fresh citrus (up \$15.6 million or 24 percent). The categories with the most significant decreases were dried fruit (down \$6.1 million or 25 percent) and frozen fruit (down \$1.1 million or 17 percent). For FY 2000 to date (October-March), the total value of U.S. horticultural exports was \$4.3 billion, roughly equal to FY 1999 during the same period.

To access **FAS Attache Reports** online, please reference the following Internet address:

<http://www.fas.usda.gov/scripts/attacherep/default.asp>

Search through the country and market reports prepared by FAS attaches covering over 20 horticultural and tropical product commodities and nearly 130 countries. Search by keyword, including country and commodity.

Cocoa and Honey Reporting Coverage Discontinued

Beginning with the June, 2000, Tropical Products: World Markets and Trade Circular and the November, 2000, Sugar: World Markets and Trade Circular, commodity and country analysis and statistical tables for cocoa and honey will be discontinued. This decision was necessitated due to declining Foreign Agricultural Service budget resources and the need to more strategically target remaining resources in support of the agency's primary mission to facilitate the expansion of export opportunities for U.S.-produced agricultural commodities. The Horticultural and Tropical Products Division (HTP) expects to continue to receive voluntary reporting on cocoa and honey production and trade from an abbreviated number of countries and these will continue to be posted on the FAS and HTP Home Pages upon receipt.

What's New on the Homepage?

The Horticultural & Tropical Products Division has introduced an enhanced feature on its homepage designed to bring the latest information to the public as efficiently as possible. The site will contain information on policy and technical developments affecting trade in horticultural commodities, as well as selected reports submitted by FAS overseas offices and special reports prepared by the division. The information will typically remain on the site for approximately one month, before being archived. For further information on this new feature, please contact Nancy Hirschhorn (202) 720-2974. Go to <http://www.fas.usda.gov/http/> and click on "What's New?"

U.S. Horticultural Exports to Japan

In calendar year 1999, U.S. horticultural exports to Japan grew 2 percent to reach \$1.7 billion. Deciduous fruit exports grew 76 percent to almost \$98 million. Dried fruit, fresh vegetables, and juice exports all rose approximately 14 percent in CY1999 leading to \$47 million more in exports than in 1998. In 1999, Japan lifted phytosanitary bans on a number of apple, tomato, and cherry varieties, which will lead to increased U.S. exports in these products in the future.

U.S. Horticultural Exports to Japan Grew 2 Percent in CY1999

After a steady decline since 1996, U.S. horticultural exports to Japan were up in calendar year (CY) 1999. Total horticultural exports rose almost two percent in value to \$1.7 billion. A strong yen aided this growth even though the Japanese economy was sluggish.

The U.S. market share of Japan's horticultural market grew a fraction of a percentage last year to 26 percent, but China edged out the United States as the top supplier, with a 28 percent share of Japan's horticultural market. France, the Philippines, and South Korea rounded out the top 5 suppliers, holding a combined market share of 20 percent. The United States still has the highest market share in fruits and nuts, at 38 percent. The Philippines comes in second at 20 percent, followed by China, a very distant third, with 10 percent. China dominates the Japanese import market for vegetables, holding a 52 percent market share. The bulk of Japanese imports from China are in the frozen and dried vegetable categories.

The U.S. horticultural export growth winners in 1999 were deciduous fruits and melons. Deciduous fruit exports to Japan rose 76 percent in value, compared with 1998, to reach \$97.6 million. Volume rose 57 percent to 23,000 tons during the same period. Sweet cherry exports made up the majority of the deciduous fruit category. Melon exports rose 62 percent to reach just over \$8 million. Fresh fruit exports (excluding citrus, deciduous, and melons) grew by 25 percent in value to reach \$47 million, while increasing by 19 percent in quantity to 17,000 tons. Dried fruits, fresh vegetables, and juices all grew about 14 percent in 1999. These three categories gained the most in dollar terms. Dried fruit exports were up \$12 million, fresh vegetables grew by \$18 million, and juices grew by \$17 million. Although ginseng makes up a small percentage of U.S. horticultural exports, it saw the highest percentage growth in 1999, rising 151 percent in value and 222 percent in quantity.

Hop exports rebounded in 1999, rising 24 percent in value and 53 percent in quantity. A total of 529 metric tons were exported, showing the first growth since 1995. The growth in 1999 is also very close to 1995's high of 595 metric tons.

Miscellaneous fresh fruits and vegetables, frozen vegetables, and citrus together made up 43 percent of total U.S. horticultural exports to Japan in 1999. These three largest horticultural export categories were down slightly in terms of value last year. Miscellaneous fresh fruit and vegetable exports fell one percent to \$263 million. Frozen vegetable exports were also down one percent at \$259 million. The third largest export category, citrus, fell four percent to \$215 million. The drop in citrus exports was mainly due to the disastrous December 1998 freeze, which hurt California orange exports.

Japan's demand for all wines fell 31 percent in 1999. U.S. wine exports fell just 14 percent in value to \$79 million, but were still the second highest ever, following the 1998 record of \$92 million. France still has the highest market share for wine in Japan but their exports also fell in 1999. The suppliers with the largest growth in export value to Japan for all beverages were South Korea and China, growing 40 percent and 47 percent, respectively.

Even though Japan imported more nursery products in 1999, the U.S. share of the market fell. U.S. nursery product exports, excluding cut flowers, fell 73 percent in value and 46 percent in quantity. Japan's top five suppliers all sent more nursery products in 1999.

U.S. exports of tree nuts and essential oils to Japan fell \$14 million (12 percent) and \$8 million (16 percent), respectively, in 1999, the third straight drop in export value. On average, from 1997 to 1999, tree nut exports have fallen 13 percent annually and essential oils have fallen 37 percent per year. However, tree nut and essential oil exports have remained steady in terms of quantity for the past two years, at 29,000 tons and 3,500 tons, respectively. Low prices, in both cases, can explain the decrease in dollar value exports. Tree nut prices have fallen significantly, due to record U.S. and world supplies, with almond prices falling 33 percent and walnut prices falling 36 percent since 1996.

U.S. exports of olives to Japan were down by half in quantity terms in 1999 to 550 tons, which is more in line with pre-1998 export figures. Nineteen ninety-eight was a banner year for olive exports to Japan, with exports increasing 103 percent from 1997. Export numbers from years 1993 to 1997 averaged 540 tons. In value terms, olive exports were down 15 percent to \$1.7 million in 1999 but were still significantly higher than 1996 and 1997 figures.

New Market Opportunities

As our FAS Agricultural Affairs office in Tokyo reported over the past year, there are a number of significant new market opportunities for U.S. horticultural exports. Specifically, the post mentioned the potential market opportunities for apples, tomatoes, and cherries.

Apples

In 1999, the Ministry of Agriculture lifted its phytosanitary ban on five varieties of U.S. apples (Braeburn, Fuji, Gala, Granny Smith, and Jonagold). Given the size of Japan's apple market (wholesale sales exceeded \$1.5 billion in 1997), and competitiveness of U.S. industry, long-term sales potential for the new varieties is considered significant. However, a major challenge for U.S. apple marketers will be to provide products that meet consumers' high quality expectations at a competitive price. Given the difficulty in competing head-to-head with local apples, Japanese traders have suggested that the greatest competitive advantage of the U.S. apple industry may be its ability to ship numerous apple varieties not grown in Japan. While consumer acceptance of varieties such as Granny Smith, Braeburn, and Gala is unknown, willingness to try new fruit varieties is very high in Japan. Japanese traders recommend that U.S. Fuji apples be priced well below domestic Fuji apple prices in order to be competitive in Japan, due to strong consumer perceptions that local apples offer better quality and are safer (less pesticide residues) than imported product. While trader focus will be on Fuji, the other liberalized varieties (Gala, Granny Smith, Braeburn) also offer niche market potential. Since these varieties are not grown in Japan, initial curiosity is expected to be high when they are introduced to Japan. The Tokyo office estimates a \$50 million market (industry estimates range from \$20 to \$36 million), but exports in the next couple of years may not exceed \$10 million due to limitations on varieties and the high cost of the inspection program.

Cherries

In 1999, Japan's Ministry of Agriculture also lifted its phytosanitary ban on two cherry varieties, allowing for the first sales of two late-season varieties, lapin and sweetheart. Boosted by excellent quality fruit and competitive pricing, U.S. cherry exports reached a record high in 1999, at just over 1.8 million cartons (\$90 million) doubling 1998 sales. A short harvest of domestic cherries and other competing fruits also contributed to the record performance.

Tomatoes

Due to Japan's lifting of the ban on cherry, roma, and other previously unapproved varieties of tomatoes, we can expect to see favorable conditions for U.S. tomato exports. The FAS office in Tokyo reported that sales potential is particularly good for roma tomatoes, as a substitute for canned tomatoes, in the emerging Japanese cooking tomato market. Roma tomatoes are not grown in Japan and imports of fresh cooking tomatoes from other suppliers are insignificant. Market opportunities also exist for cherry tomatoes, particularly during late Fall through early Spring when prices in Japan are relatively high.

Market Growth Opportunities

The Agricultural Affairs office in Tokyo also noted two horticultural products that have the potential for market growth in the future.

Lettuce

The demand for fresh U.S. lettuce in Japan is growing, primarily in the fast food sector. Japan's \$4.8 billion sandwich/hamburger market, with 6,800 restaurants nationwide, is growing at 5 percent to 7 percent annually. Due to the high cost of Japan's fresh vegetables, high quality, price competitive U.S. fresh lettuce could generate significant interest in this restaurant sector. Though the Government of Japan's phytosanitary import requirements remain strict, a potentially large, untapped market exists for fresh U.S. lettuce in Japan.

Oranges

Although oranges are not new to the Japanese market, we can expect to see a jump in exports in 2000 due to the recovery in the California orange crop. Despite bumper crops of Japanese mikans and other competing fruits this season, Japanese imports of fresh oranges are expected to rebound to normal levels in 1999/2000. Japanese production of fresh oranges continues to decline and accounts for one percent of total citrus production. Japan relies heavily on imports of fresh oranges, with California being the most important supplier. Japanese consumption of fresh oranges rises in early spring and peaks in April and May, as the taste of California oranges matures. Fruit quality, particularly Brix levels, is an important factor in Japanese fresh orange demand.

Japanese Exports to the United States Rose 16 Percent

In CY1999, the United States imported \$196 million worth of horticultural products from Japan, up 16 percent or \$27 million from the year before. Frozen vegetables and edible tree nuts grew the most, gaining 62 percent and 61 percent, respectively. The other vegetable categories also saw significant growth in 1999. Dried vegetables grew 30 percent to reach \$15 million. Prepared vegetables went up 21 percent to \$14 million. Although the potato category made up just a small percentage of all Japanese horticultural exports to the United States, it saw a 35 percent jump. Fresh vegetables saw the smallest growth of all the vegetable categories but still rose a respectable seven percent.

(The FAS Attache Report search engine contains reports from all over the world on more than 10 horticultural products. For more information on horticultural production and trade visit the H&TP website at: <http://www.fas.usda.gov/http/>. For further information on this article, contact Clarissa Valdivia at 202-720-6590.)

Strawberry Trade Situation in Selected Countries

In 1999/2000, fresh and frozen strawberry production in selected countries is forecast to rise 4 percent and 3 percent, respectively, as a result of favorable weather. Greater production in selected countries is expected to boost total fresh strawberry exports by 8 percent and total frozen strawberry exports by 10 percent. Out of selected countries, Poland is expected to have the most significant one year increase in both fresh and frozen strawberry exports, which are estimated up 29 percent and 38 percent, respectively. In the United States, fresh strawberry production is expected to rise 8 percent to 885,000 tons with exports rising 6 percent to 60,000 tons .

Canada–Fresh Strawberries

Strawberry production in 1999/2000 (April 2000 to March 2001) is forecast at 27,000 tons, a slight increase from the 26,548 tons produced the previous year. Overall, Canada's production of fresh strawberries has remained flat in recent years, reflecting a combination of reduced planted area and weather-related production difficulties.

During 1999/2000, Canada is expected to import 45,000 tons of fresh strawberries, 96 percent of which will originate in the United States. Imports from Mexico, although still small, are expected to increase 218 percent between April 1995 and March 2001 .

Under the North American Free Trade Agreement (NAFTA), fresh strawberries from the United States and Mexico enter Canada duty-free. The Canada/Chile Free Trade Agreement provides free access for fresh strawberries from Chile. Canada chose not to apply any seasonal tariffs on fresh strawberries from any origin in 1999.

Over the short term, prospects for increased strawberry consumption in Canada are favorable. The adverse publicity surrounding the cyclosporan scare of the mid-1990s appears to have faded, contributing to increased fresh strawberry purchases among consumers. In addition, real disposable incomes in Canada are expected to rise over the next few years, which may help offset the perception by the average consumer that fresh strawberries are expensive.

Canada–Frozen Strawberries

Production of frozen strawberries is estimated at 3,000 tons during 1999/2000, up 3 percent from

the previous year. Domestic production however, constitutes only about 16 percent of frozen strawberry consumption. With demand increasing at a greater pace than production, it is expected that imports will rise 4 percent to 17,000 tons during 1999/2000, while exports will decline 17 percent to 550 tons. In 1998/99, Canadian imports of frozen strawberries grew 56 percent over a 3 year period reflecting the increase usage of frozen strawberries as a food manufacturing ingredient.

Under NAFTA all import duties on U.S. frozen strawberries including any seasonal duties were reduced to zero on January 1, 1998. Frozen strawberries from Mexico and Chile face a duty of 2.6 Canadian cents/kg and 3.5 Canadian cents/kg, respectively. Tariffs on frozen strawberries from Mexico and Chile will be phased out by 2002.

Mexico—Fresh Strawberries

Mexico's fresh strawberry production in 1999/2000 (August 1999 to July 2000) is forecast at 140,000 tons, up 4 percent from the previous year as a result of greater area under cultivation. According to growers in Michoacan, and Guanajuato, excellent strawberry prices during 1998/99 encouraged them to plant more for 1999/2000. Frosts during the first flowering in December 1999, however, reduced yields and quality. Given the weather conditions in Michoacan and Guanajuato thus far, yields during 1999/2000 are expected to average 18.9 ton/Ha, down 6 percent from the previous year.

Fresh strawberry exports are forecast at 42,000 tons for 1999/2000, a 6-percent-decrease from the previous year. A frost in December 1999 reduced the quality of the strawberry crop resulting in less supply for export purposes. In addition, demand from international markets is expected to be slightly lower because of higher production in the United States. Imports of fresh strawberries are expected to increase 5 percent to 4,200 tons as better purchasing power among Mexican consumers fuel greater demand.

Mexico—Frozen Strawberries

Frozen strawberry production in 1999/2000 is forecast at 54,000 tons, down 13 percent from the previous year. Low international prices for frozen strawberries are driving a shift towards the domestic fresh market. The fresh market is expected to grow 55 percent in 1999/2000 compared to 5 percent for the domestic frozen market.

Exports of frozen strawberries are forecast to decline 17 percent to 43,000 tons in 1999/2000 as a result of low international prices and lower demand. Frozen strawberry exports in 1998/99 were revised upward to 51,600 tons, due to higher demand and excellent international prices. Frozen strawberry imports are still not significant within the Mexican market.

Under NAFTA, the 2000 import tariff rate on frozen strawberries is 4.2 percent. Mexico charges a 20 percent duty on imports from non-NAFTA countries.

Poland–Fresh Strawberries

Poland's fresh strawberry production (January 2000 to December 2000) increased by 12 percent to 200,000 tons in 1999/2000, compared with the previous year. Despite the low quality berries produced in 1998/99, strawberry production was profitable for Polish farmers for a second year in a row, resulting in this year's 12-percent-increase in production.

Exports of fresh strawberries are estimated to rise 29 percent to 15,900 tons in 1999/2000, since many Polish farmers have increased production of table varieties which attract higher prices and could increase the profitability of their operations. The majority of Polish strawberries were exported to Germany and Austria in 1998/99. Limited quantities of imported fresh strawberries, mostly from Spain and Italy, are available during the off-season, mostly in supermarkets and vegetable stands in larger cities.

Poland–Frozen Strawberries

Sixty to seventy percent of strawberry production is sold as a frozen product. In 1999/2000, production of frozen strawberries is forecast at 106,000, up 9 percent from the previous year. Frozen strawberry production for 1998/99 has been revised down to 97,000 tons, as a result of poor strawberry quality that led to unusually large waste.

Consumption of frozen strawberries is only about .2 kg per capita. Poles prefer purchasing fresh product during the harvest season as well as consuming products processed at home. Consequently, the majority of Poland's frozen strawberry production is exported. In 1999/2000 exports are estimated at 99,000 tons, up 38 percent from the previous year. Poland continues to be the largest supplier of frozen strawberries to the European Union (EU), with Germany as the largest market.

Japan–Fresh Strawberries

Strawberry production for 1999/2000 (October 1999 to September 2000) is expected to remain unchanged at 180,000 tons. Almost all of Japan's strawberries are produced in hot houses, with production from December through June. Peak harvesting occurs from January through April.

Imports of fresh strawberries are estimated at 5,000 tons in 1999/2000, up 6 percent from last year. The United States remains the largest supplier of fresh strawberries to the Japanese market. However, market share has fallen from 94 percent in 1997/98 to 86 percent in 1998/99 as a result of greater import competition from South Korea and New Zealand.

Traditionally, U.S. fresh strawberries have largely been consumed by Japan's confectionary industry as cake decorations. Lately, Japanese retailers have increased marketing of U.S. fresh berries for home consumption for use in salad mixes, cut fruit mixes, fruit juices, etc. Japan's hotels and restaurants are also developing new menus in seafood and Italian cuisine with U.S. fresh

strawberries.

Japan–Frozen Strawberries

Japan's production of frozen strawberries is very small, with off-grade fresh strawberries usually diverted to the processing sector.

Imports account for virtually all of the frozen strawberries consumed in Japan. In 1999/2000, imports of frozen strawberries are estimated to remain at 30,000 tons, unchanged from the previous year. The United States remains the largest supplier of frozen strawberries to the Japanese market but has lost market share which dropped from 48 percent in 1997/98 to 44 percent in 1998/99 as a result of greater import competition from China, South Korea and Mexico. The majority of U.S. frozen strawberries have gone to Japan's jam manufacturing sector, while some are also starting to show up in such value-added products as fruit juices, pastries, strawberry smoothies and strawberry yogurt.

Spain–Fresh Strawberries

After reaching a record 370,000 tons in 1998/99, production is forecast to decline to 345,000 tons in 1999/2000 (January 2000 to December 2000) as a result of adverse weather. The industry is concerned with declining reservoir levels from the lack of precipitation in the Huelva, Andalucia area, where most of the strawberry cultivation occurs. Other concerns include the threat of imports from North Africa, particularly Morocco, and the shortage of available labor during harvest time.

As a result of the smaller production, exports of fresh strawberries are forecast to reach 220,000 tons in 1999/2000, down 7 percent compared to the previous year. Other EU countries continue to be the primary market. Germany, France and the United Kingdom are the leading destinations for Spain's fresh strawberries. Imports, which continue to be minimal, are mainly used by processors during Spain's non-producing season. Few, if any opportunities exist for U.S. strawberry exporters.

Spain–Frozen Strawberries

In 1999/2000 production of frozen strawberries fell by 13 percent to reach 39,000 tons, as a result of the expected decline in strawberry production. Most of Spain's strawberry production is for the fresh market with only about 15 percent of strawberry production destined for processing.

Exports are also expected to decline in 1999/2000 after the record 30,694 tons achieved in 1998/99. Frozen strawberry exports are forecast to fall by 12 percent to 27,000 tons. The majority of frozen strawberry exports are destined for other EU countries.

Italy

As a result of favorable weather, fresh strawberry production in Italy is expected to reach 120,000 tons in 1999/2000 (January 2000 to December 2000), up 9 percent from the small crop in 1997/98. The long-term production trend however, remains negative as the area under cultivation continues to decline. In 1999/2000, planted area is estimated to be down 3 percent from the previous year. Increasing labor costs and less profitability are some of the reasons farmers have started switching to other crops.

Exports of fresh strawberries are expected to rise 6 percent to 50,000 tons because of the large 1999/2000 crop. However, Italy continues to face strong competition from Spain in major European markets. During 1998/99, fresh strawberry exports fell 12 percent to 47,000 tons. Major markets include Germany, Austria, and Switzerland. Imports, mainly from Spain, continue to increase in 1999 mostly as a result of decreased domestic supplies.

In 1999/2000 frozen strawberry production is forecast to rise by 30 percent to 13,000 tons, mostly as a result of the larger strawberry crop. Trade in frozen strawberries remains marginal in 1999/2000, with imports falling 17 percent to 7,000 tons and exports reaching 4,000 tons.

United States

Strawberry production (January 2000 to December 2000) is forecast at 885,000 tons in 1999/2000, up 8 percent from the previous year due to favorable weather conditions and increased acreage. According to the National Agricultural Statistical Service (NASS), harvested acreage in California and Florida, the two largest strawberry producing states, is up 12 and 15 percent, respectively, compared to last year. As a result of the large strawberry crop expected in 1999/2000, frozen strawberry production is also forecast up 7 percent to reach 265,000 tons.

With greater production, fresh strawberry exports will continue to rise, reaching 60,000 tons in 1999/2000, a 6-percent increase compared to the previous year. During 1998/99, fresh strawberry exports increased by 14 percent to 56,368 tons compared to 1997/98. Canada, Japan and Mexico were the three largest markets for fresh U.S. strawberry exports in 1998/99. Fresh strawberry imports rose dramatically to 43,000 tons in 1998/99 as a result of strong domestic demand, but imports are expected to decline somewhat in 1999/2000 due to the larger strawberry crop.

Exports of frozen strawberries are also expected to rise 11 percent to 28,000 tons. In 1998/99 exports of frozen strawberries reached 25,209 tons, down 7 percent from 1997/98. The largest markets for frozen U.S. strawberries in 1998/99 were Japan, Canada and Australia. At the same time, imports of frozen strawberries rose 113 percent to a record 40,721 tons in 1998/99. Frozen

strawberry imports relieved the pressure on stocks caused by several years of weather-reduced crops and strong international demand. Stocks returned to more normal levels by the end of 1998/99 and frozen strawberry imports are expected to decline in 1999/2000.

(The FAS Attache Report search engine contains reports on fresh and frozen strawberry industries for 6 countries, including Spain, Italy, and Mexico. For information on production and trade, contact Karina Ramos at 202-720-6877. For information on marketing contact Elizabeth Mello at 202-690-6057).

Canned Deciduous Fruit Situation for Selected Countries

Estimated world canned peach production for marketing year 1999/2000 is estimated at a record 1,242,616 tons up 14 percent from the previous year, and 7,998 tons over the previous record set in 1992/93. Canned pear production is estimated at 156,201 metric tons, down 20 percent from the previous year record level of 194,321 tons.

Canned peach exports are estimated at a record 617,900 tons up 15 percent from last year and exceeding the previous record set in 1995/96 by 34,353 tons. Ending stocks are placed at 191,843 tons up 51 percent from last year.

Extraordinary peach production in Greece and a reduced pear crop in South Africa contributed to these changes.

World Canned Peach Situation

World production of canned peaches for the 1999/2000 crop year is estimated at 1,242,616 tons. Production for the Northern Hemisphere for the 1999/2000 marketing year is placed at 1,017,469 tons, up 20 percent from last year's level. The Southern Hemisphere's 1999/2000 canned peach production is estimated at 225,147 tons, down 8 percent.

EU canned peach production for marketing year 1999/2000 is set at a record 649,300 tons, up 35 percent from last year due to strong Greek production. Greece accounts for 65 percent of EU production. In 1999 Greece produced 668,000 tons of fresh clingstone peaches and 305,000 tons of fresh freestone peaches compared to 272,000 and 139,000 tons, respectively in 1998. The quantity of peaches withdrawn this past season totaled 212,000 tons compared to 2,500 tons in 1998. Under EU regulations, the maximum allowable withdrawal quantity of peaches may not exceed 40 percent of the total marketed for fresh and processing, which would equal 274,000 tons for Greece in 1999.

The Italian canned peach production was almost double that of last year, reaching 41,000 tons, which is the highest output in the last six years. Ideal weather conditions led to the bumper crop. Due to the large crop, Italy sold 143,000 tons of peaches and nectarines into withdrawal, up from 12,500 tons in 1998 and 24,000 tons in 1997.

Exports from EU countries are estimated at 479,000 tons up 28 percent from last year. EU exports will account for 78 percent of total world exports compared to 70 percent in 1998/99. Exports from

the Southern Hemisphere are estimate to be down 11 percent from the previous year due to an 8 percent drop in production.

The principal reason for the decline in Southern Hemisphere output is due to Chile's return to a more normal production level following last year's extraordinary record of 50,000 tons. This year estimated production of 36,000 tons is only 2,000 tons under the ten-year-average.

Chile's total exports of canned peaches in marketing year 1998/99 were much larger than previously expected, due to strong demand by Mexico in late 1999. Mexico turned to Chile's lower priced product to fill a demand left open by reduced EU supplies. However, due to renewed EU production, Chile expects significantly weaker demand for its exports, due lower prices offered by EU competition.

South Africa's production of canned peaches for Marketing Year (MY) 1999/2000 is estimated at 82,307 tons, a decrease of 7 percent from the previous years level, but 2,000 tons over the ten year average. The decline is due to unfavorable weather conditions.

As of January 200,0 South Africa will receive a gross weight tariff rate quota of 58,000 tons of canned fruit shipped into the EU. EU duties on canned fruit, which currently range between 17 and 24 percent, will be reduced by 50 percent for the quota amount. Currently, South Africa ships about two thirds of its canned fruit exports, or about 110,000 metric tons of canned fruit into the EU. South Africa accounts for about 85 percent of EU canned peach, 50 percent of canned pear, 55 percent of canned fruit mixtures, and 50 percent of canned apricots imports from third countries.

Canned Pears

World canned pear production for 1999/2000 is estimated at 156,201 tons, down 22 percent from the previous year. Exports are forecast to be down 6 percent to 94,375 tons, which will be among the lowest world exports in the last ten years. EU production is set at 98,400 tons equal to its ten-year- average but down 25 percent from last year's record of 125,878 tons. Production in the Southern Hemisphere is estimated at 57,101 tons, down 16 percent from 1998/99.

U.S. Canned Fruit Exports

Exports are an integral part of the California canned cling peaches, fruit cocktail and U.S. Bartlett pears industry's overall economic health. U.S. canned fruit exports are forecast to reach 45,000 tons in 1999/2000. With more than adequate supply expected through the end of the year for canned fruit, market promotion efforts under the Market Access Program (MAP) are vital to help the U.S. canned fruit industry compete against low cost heavily subsidized product from countries such as Greece. In MY 1999, the California Cling Peach Growers Advisory Board plans to use MAP funds

in Canada, China, Hong Kong, Japan, and Mexico to educate and convince trade and consumers of the quality, nutritional value, and convenience of U.S. canned fruit.

(The FAS Attache Report search engine contains reports on the canned fruit industry for more than 8 countries, including Greece, South Africa, and Chile. For further information on production and trade contact Robert Knapp 202-720-4620. For information on U.S. marketing opportunities, contact Kristin Kezar at 202-690-0556.)

Outlook for Concentrated Apple Juice Production and Trade in Selected Countries

Production of apple juice (AJ) in selected countries in 1999/2000 is estimated at 633,000 tons (70/71 degrees brix equivalent), 7 percent below the previous season's output. The downturn mainly reflects a sharp decrease in Polish and Argentine AJ production. On the other hand, production in 1999/200 in the United States, the world's largest producer, is estimated to increase modestly to 150,000 tons. Exports of AJ from selected countries in 1999/2000 are estimated at 523,000 tons, 3 percent below last season's shipments, due primarily to expected reduced exportable supplies from Argentina. U.S. AJ exports in 1999/2000, however, are expected to increase for the first time in three years. Strong demand from major customers, such as Japan, Canada, Venezuela, and Taiwan has improved overall U.S. 1999/2000 AJ export prospects. U.S. AJ imports are expected to continue to increase in 1999/2000 to 225,000 tons.

Northern Hemisphere

United States

U.S. AJ *production* in 1999/2000 is estimated at 150,000 tons, up 3 percent from the 1998/99 output. Increased apple production in some of the major eastern apple processing states, such as New York, Michigan, Pennsylvania, and Virginia has improved overall U.S. AJ production in 1999/2000. Processing of apples in 1999/2000 is expected to increase 21 percent in New York, 33 percent in Michigan, 41 percent in Pennsylvania, and 38 percent in Virginia. Normally, about 35 percent of New York's apples for processing are diverted to the juice and cider industries compared with 40 percent in Michigan and 25 percent in Pennsylvania.

U.S. AJ *imports* in 1999/2000 are estimated at 225,000 tons, up 3 percent from last season, based on higher imports to date. AJ imports into the United States, which are mostly concentrated non-frozen, totaled 128,119 tons, 70/71 degrees brix equivalent, for the period July 1999 through January 2000, up 9 percent from the same period last season. The increase mainly reflects more imports from Argentina and Chile, which are running ahead 65 percent and 95 percent, respectively, from the same period last season. Although overall U.S. AJ imports for the period July 1999 through January 2000 were up 9 percent, imports from China decreased 72 percent. The decrease likely reflects the dumping investigation initiated last year by the U.S. Department of Commerce, International Trade Administration (ITA), against low-cost AJ concentrate from China. As such, on Thursday, April 6, 2000 the ITA announced final antidumping duties on AJ imports from China. Dumping margins were established between 0 percent and 52 percent, down slightly from the November 1999

preliminary calculation of 55 percent. Correspondingly, on Monday, May 22, 2000 the International Trade Commission (ITC) is expected to issue its final injury ruling. If ITC determines that injury or threat of material injury does exist, the Department of Commerce will issue an antidumping order directing Customs officials to assess antidumping duties on all imports of Chinese non-frozen AJ concentrate.

The ITA final dumping ruling on Chinese AJ should help improve domestic prices for apple products. There is already some indication that import prices for AJ are firming up. For the period July 1999 to January 2000, average AJ import prices for all countries are up almost 30 percent from the same period last season. During the same period, average prices for AJ from China increased 31 percent. Industry sources in the Pacific Northwest report that, as of March 15, 2000, season to date prices for juice apples in the northwest are estimated around \$120 per ton, compared to an average of \$40 per ton last season.

U.S. AJ *exports* in 1999/2000 are expected to increase for the first time in three years, based on higher shipments to date. As such, AJ exports are estimated at 8,000 tons in 1999/2000, up 25 percent from shipments last season. For the period July 1999 through January 2000, U.S. AJ exports totaled 4,200 tons, 70/71 degrees brix equivalent, up 25 percent from the same period last season. Exports to Japan, Canada, and Venezuela are running ahead 23 percent, 26 percent, and more than 270 percent, respectively. Strong demand from these countries is expected to continue throughout the season.

Poland

Poland is the one of the world's leading AJ producing and exporting countries. Poland's AJ production in 1999/2000 is estimated at 110,000 tons, 15 percent below the 1998/99 output. Tight supplies of processing apples will likely hamper Polish AJ production for the second consecutive season. In Poland, around 60 percent of the apple crop is processed, while most of the remaining 40 percent is directed to the fresh domestic market. Processed apple products include concentrated juice, fruit beverage, wine, and jam.

Although Polish AJ production in 1999/2000 is expected lower, exports are estimated to recover to 115,000 tons, 10 percent above 1998/99 shipments. The increase reflects larger available stocks, the result of lower AJ sales to Germany in 1998/99. Most Polish AJ production is exported (about 95 percent) to neighboring countries. Germany is by far the leading customer, normally accounting for more than 80 percent of total Polish AJ exports.

Southern Hemisphere

Argentina

Argentina is the leading AJ producer in the Southern Hemisphere. Argentine production of AJ in 1999/2000 is estimated at 51,600 tons, down sharply from 1997/98. Fewer apples are expected to

be processed this season, reflecting a much smaller fresh crop. Traditionally, apples not suitable for the fresh domestic and export markets are processed. An estimated 80 percent of Argentina's processed apples go to AJ, 15 percent are used for cider, and 5 percent are dried or processed into jams, vinegar, and other products.

Argentina is the third largest AJ exporter for selected countries following Germany and Poland. Exports of AJ in 1999/2000 are estimated at 51,600 tons, more than 30 percent behind last season's shipments, due to lower exportable supplies. The United States is by far Argentina's major AJ market, accounting for more than 95 percent of total shipments.

Chile

Chile's AJ production in 1999/2000 is estimated at 24,000 tons, down more than 20 percent from the 1998/99 output, mainly the result of a lower apple crop and, as such, reduced processing. There are six juice processing plants in Chile with excess production capacity. Traditionally, apples not suitable for the fresh export market, are processed into apple juice.

Chilean AJ production is mainly directed to the export market. Chile's AJ exports in 1999/2000 are estimated at 23,000 tons, down 23 percent from 1998/99. The United States is Chile's largest AJ customer, accounting for more than 70 percent of total export sales. However, the importance of other markets, such as Japan, Canada, and Australia is increasing. Only small amounts of AJ are consumed domestically, principally single-strength type.

(The FAS Attache Report search engine contains reports on the apple juice industry industry for more than 10 countries, including Argentina, Chile, and Germany. For further information on supply, distribution, and trade, contact Samuel Rosa at (202) 720-6086)

World Trade Situation and Policy Updates

U.S. Final Dumping Ruling on Chinese Apple Juice Should Help Firm Domestic Prices for Apple Products

On Thursday, April 6, the U.S. Department of Commerce announced final antidumping duties on concentrated apple juice (CAJ) imports from China. Dumping margins were established between 0 percent and 52 percent, down slightly from the November preliminary calculation of 55 percent. Correspondingly, the U.S. International Trade Commission (ITC) conducted a final hearing Monday, April 10, regarding domestic industry injury, and will issue its final decision by May 22. Although overall U.S. CAJ imports this season (from July 1999 to January 2000) were up 8 percent, imports from China decreased 72 percent. Moreover, there is some indication that domestic prices for apples and apple products are firming up. Industry sources in the Pacific Northwest report that, as of March 15, season to date fresh average apple prices are \$17 per 42 pound standard box compared to \$14 per box during the same period last season. Prices for juice apples in the northwest this season are estimated around \$120 per ton, compared to an average of \$40 per ton in 1998/99.

Coffee Producers Develop Plan to Control Coffee Supplies

On April 5, the Association of Coffee Producing Countries (ACPC) recommended at a technical meeting that the ACPC Council adopt plans for a coffee retention scheme. The ACPC is proposing the retention plan in an effort to control the supplies of coffee in the market in an attempt to raise sagging coffee prices. Prices for Brazilian arabicas in March dropped nearly 18 percent from the December price. Reports indicate that the retention plan is similar to a scheme adopted by the ACPC in 1993 and would be triggered when prices fell below certain levels. Although no specific details of the plan were released, the technical meeting members are submitting the proposal to the 14-member country ACPC Council on May 8 and 9, for implementation from June 1, 2000.

Recent Opening of Yemeni Apple Market Should Further Boost U.S. Export Opportunities in the Middle East

According to the Agricultural Trade Officer headquartered in Riyadh, the Government of Yemen issued a decree lifting the import ban on fresh apples, effective March 23, 2000. This development follows longstanding FAS efforts to secure access to this market. Apple production in Yemen remains very limited (about 2,000 tons annually), with domestic supplies generally available for a very short time (mid May through July). As such, Yemen shows significant potential as a market for U.S. apples. In fact, significant quantities of apples have been entering the country via Saudi Arabia for several years through unofficial channels. U.S. fresh apple exports to the Middle East have increased considerably in recent years. In calendar year 1999, U.S. apple shipments to the region totaled nearly 60,000 tons, valued at \$31 million, up 56

percent in volume and 39 percent in value from exports in 1995. It is estimated that U.S. apple sales to Yemen could approach \$8 million by 2005.

Washington State Vineyard Plantings Double in Size in Six Years

Total wine grape acreage in Washington state's wine appellations has increased from 11,100 acres in 1993 to 24,806 acres in 1999, according to a USDA study. Wine grapes are now the fourth most important fruit crop in the state, after apples, cherries, and pears. Despite the increased acreage, the demand for Washington wines is greater than the grape supply. The growing demand for red wine has led to some important shifts in plantings from white to red wine grapes, with red acreage now exceeding white acreage. In 1999, 6 percent of Washington's wine production was exported. Canada, the United Kingdom, and Japan are the state's top export markets. The Washington Wine Commission participates in the MAP program through the Northwest Wine Coalition. In 1999, total U.S. wine exports reached a record \$540.9 million (2.8 million hectoliters), up 2 percent by value from the previous year.

Organic Updates

Organic Opportunities in the French Supermarket Sector

As noted in a recent French press article (centrist *Les Echos*, 3/8/00), organic foods are a specific market segment in French supermarkets, but production is insufficient for supermarkets to meet demand. Since increased production of organics in France started only in 1997, low supplies mean that France must import more than a third of its organic food products. These come mainly from Germany and Italy. As a result, French imports of organic food products have risen steadily by 20 percent since 1993, reaching 30,000 tons.

The moment is right for U.S. suppliers who can supply high quality products at a reasonable price (keeping in mind the currency weakness of the Euro) to penetrate the French market. According to FAS's AgOffice Paris, best prospects include grains, almonds, pistachios, dried fruits, flour, tropical fruits, milk and organic proteins for animal feed. A promotional campaign: "*Le printemps bio*" (Spring Organics), organized by the different operators in the organic sector, will take place in France May 20-27. This promotional campaign will include tastings and other promotions.

In other news from France--Organics Prominent at 37th International Agricultural Show - At the 37th International Agricultural Show (SIA), held February 27-March 5 in Paris, the organic food sector was more prominent than in previous years. Exhibitors included both small French producers and supermarket chains (Auchan, Carrefour and Monoprix), which now have their own private labels for their lines of organic products. Parliamentarians held a conference sponsored by the French National Research Institute of Agronomy (INRA), at which speakers debated a variety of definitions for natural products.

For more news on organics, see HTP's monthly newsletter "Organic Perspectives," available at the HTP home page: www.fas.usda.gov/http/organics/organics.html. The newsletter contains reports on organics from around the world gleaned from attache reports, trips made by HTP's organics staff, and other sources. The newsletter also covers items of interest about the U.S. national organic program and the domestic organic industry. A list of upcoming conferences, trade shows and other events is included in every issue.

(For further information, contact Janise Zygmunt at 202-720-1176.)

Export News and Opportunities

USDA Extends GSM-102 Credit Guarantees to Lebanon and Amends Programs in Azerbaijan, Brazil, Turkey and Lebanon

On April 13, the U.S. Department of Agriculture (USDA) authorized \$10 million in credit guarantees for sales of U.S. agricultural commodities to Lebanon under the fiscal year 2000 GSM-102 program. The Central Bank of Lebanon is the approved bank for \$3 million of the total \$10-million allocation. For the remaining \$7 million, any bank approved by the Commodity Credit Corporation (CCC) in Lebanon is eligible. Additional information on terms and conditions is available in FAS program announcement PR 0165-00.

Exporters may apply for credit guarantees on a first-come, first-served basis to cover sales of any of the commodities specified in the GSM list of commodities published in FAS program announcement PR 0003-00, issued January 5, 2000, or as superseded. The list of eligible commodities will apply to all individual country and regional announcements unless otherwise stated in the announcements. The following horticultural products are eligible under the export credit guarantee programs for FY 2000: dried fruit; fresh fruit; frozen fruit; canned fruit; 100-percent fruit juices; fruit and vegetable concentrates, pastes, pulps and purees; honey; hops or hops extract; beer; tree nuts; fresh vegetables; canned vegetables; dried vegetables; wine; and brandy. From time to time, this list may be amended as additional commodities become eligible. The allocation does not assign dollar amounts to any of the commodities specified in the GSM list of commodities, providing buyers and sellers maximum flexibility in arranging the size of their transactions within the scope of the overall allocation.

During April, USDA also amended the fiscal year 2000 GSM-102 programs for Azerbaijan, Lebanon and Turkey to add any CCC-approved Bahrain branch of an approved Turkish bank as eligible. Likewise, USDA amended the Brazil GSM-102 program to add Netherlands Antilles branches of approved Venezuelan banks and availability of freight coverage for all commodities to Brazil.

The GSM-102 program makes available credit guarantees for sales of U.S. agricultural commodities overseas. USDA does not provide financing, but guarantees payments due from foreign banks. USDA typically guarantees 98 percent of the principal and a portion of the interest. The GSM-102 program covers credit terms from 90 days to 3 years.

Under the program, once a firm sale exists, the qualified U.S. exporter applies for a payment guarantee before the date of export. The U.S. exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different lengths of credit periods. The Commodity Credit Corporation (CCC)-approved foreign bank issues a dollar-denominated, irrevocable letter of credit in favor of the U.S. exporter, ordinarily advised or confirmed by the financial institution in the United States agreeing to extend credit to the foreign bank. The U.S.

exporter may negotiate an arrangement to be paid as exports occur by assigning the U.S. financial institution the right to proceeds that may become payable under the guarantee, and later presenting required documents to that financial institution. Such documents normally include a copy of the export report.

If a foreign bank fails to make any payment as agreed, the exporter or the assignee may file a claim with USDA for the amounts due and covered by the guarantee. USDA will pay the U.S. bank and will take on the responsibility of collecting the overdue amount from the foreign bank.

The GSM-102 table presents the FY 2000 GSM-102 for which USDA has authorized credit guarantees for sales of U.S. horticultural products as of April 7, 2000. Additional information about the GSM-102 program, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

<http://www.fas.usda.gov/excredits/exp-cred-guar.html>

Supplier Credit Guarantee Program: No Activity

The SCGP is unique because it covers short-term financing extended directly by U.S. exporters to foreign buyers and requires that the importers sign a promissory note in case of default on the CCC-backed payment guarantee. The SCGP emphasizes high-value and value-added products, but may include commodities or products that also have been programmed under the GSM-102 program.

The Supplier Credit Guarantee table presents the FY 2000 Supplier Credit Guarantee Program for which USDA has authorized credit guarantees for sales of U.S. horticultural products as of April 7, 2000. Additional information about the SCGP, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

<http://www.fas.usda.gov/excredits/scgp.html>

The General Sales Manager will consider requests to establish a SCGP and/or GSM Program for a country or region or amend an authorized program to include horticultural commodities and products which are currently not eligible.

The SCGP encourages exports to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without CCC guarantees. Under the SCGP, CCC guarantees a portion of payments due from importers under short-term financing (up to 180 days) that exporters have extended directly to the importers for the purchase of U.S. agricultural commodities and products. These direct credits must be secured by promissory notes

signed by the importers. CCC does not provide financing but guarantees payment due from the importer.

Program announcements which can be accessed on the Internet provide information on specific country and commodity allocations, length of credit periods, the required form of promissory note, and other program information and requirements.

(For further information on the SCGP or GSM-102 Program for horticultural commodities, contact Yvette Wedderburn Bomersheim, 202-720-0911 or Elizabeth Mello 202-720-9903).

For questions or concerns on the data included in this publication,
contact us at the address shown above.

Summaries and selected tables from many Foreign Agricultural Service world market and trade reports are available electronically. The reports include U.S. Export Sales (available electronically after 8:30 a.m. on release day); Grain: World Markets and Trade; Oilseeds: World Markets and Trade; Cotton: World Markets and Trade; Tobacco: World Markets and Trade; World Agricultural Production; the early release version of World Horticultural Products and U.S. Export Opportunities; and Tropical Products: World Markets and Trade (all available electronically after 3:00 p.m. Washington DC time on release day) as well as Sugar: World Markets and Trade; Livestock and Poultry: World Markets and Trade; Dairy: World Markets and Trade, and U.S. Planting Seed Trade (available within a week after release.)

You can read the reports on the FAS home page (<http://www.fas.usda.gov>). The reports remain "current" until the succeeding issue is available. Older issues are available in the archives section of the home page. We also make selected cover articles and graphics available from these publications, in a separate section of the site. Reports are also available from the Economic Bulletin Board at Stat-USA, on the same schedule. For more information, you may contact Stat-USA at (202) 482-1986 (Monday-Friday, 8:30-5:30 p.m. Washington, DC time.)

For more information on the FAS home page, contact Glenn Kaup, tel. (202) 720-3329; fax. (202) 720-3229; or via e-mail kaup@fas.usda.gov

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, sexual orientation, or marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotope, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 1400 Independence Avenue, SW, Washington, DC 20250-9410 or call (202) 720-5964 (voice and TDD). USDA is an equal opportunity provider and employer."
